Our Story

Technistone was founded in 1991 and is one of Europe's largest producers of engineered stone. The company has branches and distributors in dozens of countries all over the world. In 2019 Technistone became part of the American corporation Wilsonart® Engineered Surfaces, a leading producer and distributor of materials for building interiors. Wilsonart® Engineered Surfaces are inspired by nature to transform spaces and give them the look you want — and the performance you need.

We're proudly part of Wilsonart® Engineered Surfaces, driven by a mission to create surfaces people love, with service they can count on, delivered by people who care.

Together Wilsonart have enjoyed 60 years of innovation, design and production of beautiful surfaces with no intention of slowing down. Wilsonart® Engineered Surfaces was grown from a little company called Ralph Wilson Plastics founded in Temple, Texas, USA in 1956.

The technical properties of engineered stone and Technistone's wide range of decors make our products ideal for use in kitchen and bathroom countertops, bartops, tiling, staircases, wall cladding, and more. Many designer projects, modern private residences, and commercial and industrial spaces have been fitted with engineered stone by Technistone.

[More about Technistone](#)

About the Product

High durability, ease of maintenance, and attractive appearance have made engineered stone the material of choice for an increasing number of consumers worldwide. Our stone slabs are manufactured using natural mineral materials and colored pigments that are bonded with polyester resin. In addition, we use recycled glass and mirror shards in some products. Vibration under vacuum during pressing and subsequent polishing helps to achieve the non-porosity, which distinguishes engineered stone from natural stone and gives it greater resistance to staining. Natural mineral materials also provide higher scratch resistance.

Technistone's manufacturing process is subject to strict European standards that are applied to both raw material inputs and the final product. TechniStone® products are produced in large size slabs in several thicknesses, which have a wide range of applications in both the private and the commercial sectors.

TechniStone® Material Use

Kitchen countertops

Kitchen wall cladding

Bars, dinner tables

Bathroom vanity tops

Shower and bathtub cladding

Interior wall cladding

Window sills

Wall decorations

TechniStone®
A WILSONART COMPANY

R&D

Today, engineered stone is registering one of the most dynamic growth patterns of any material used in building interiors worldwide. This is due to its high utility and its many different decors, which reflect the latest design trends. Research and product development is mainly provided by our own capacities and the implementation of research activities is one of the most important long-term goals of Technistone.

Technistone produces approximately 80,000 m² of engineered stone every month, an area equivalent to eleven football pitches.

Production

Preparation of Raw Material Inputs

Raw materials used to produce TechniStone® are carefully inspected, graded and cleaned.

The resin is stored in tanks, the aggregate and silica sand are sieved and stored in silos, and the grit from natural mineral materials is kept in big bags.

Glass, mirrors and granite are crushed in machines, while vibrating screens and separators ensure that no unwanted material enters the production line.

Mixing and spreading

The raw materials go into mixing machines and are combined with blended resin.

The entire process is computer-controlled.

The prepared mixture is then poured into a rubber mold to create the TechniStone® slabs.

Pressing and kiln

The mixture is then pressed into a compact sheet using a vibrating press and a vacuum.

The slab, still in a soft state, is pushed into the kiln, where it is cured for the necessary time at a temperature of around 100°C.

Finishing

The slab is measured, calibrated to the required thickness, and then given its final finish.

The finished slab can be cut to almost any required size.

TechniStone®
A WILSONART COMPANY

Certification

A list of all products with corresponding certificates can be inspected in the [Origin](#) database. A product portfolio showing material characteristics and product certificates is also available in the [NBS Source](#) database.

The Health Product Declaration Collaborative Protocol examines the chemical substances in a product and compares them with lists of hazardous substances published by government and scientific institutions. TechniStone® does not contain any unauthorized chemicals.

Technistone's products have achieved UL's Greenguard Gold and SCS Global Services' Indoor Advantage certifications. That means they are free of any volatile organic compounds (VOCs) and do not emit any substances that can negatively influence the quality of the air indoors.

Many of Technistone's products contain more than a 20, 30, 40, and in some cases as much as a 70 percent share of recycled content.

TechniStone® complies with strict standards and procedures imposed by the National Sanitation Foundation and its products are safe for contact with food.

More information
about the specific product,
certifications may differ.

Standards

Well-trained personnel inspect and evaluate the quality of all slabs.

An objective color measurement system is used to determine the exact color shade of each slab.

Pilot samples are developed in the lab, aesthetic, physical and mechanical properties of products are improved, raw materials are checked and control tests are performed.

Product Testing According to European Standards

EN 14617-1 (Density, Water absorption)

EN 14617-2 (Flexural strength)

EN 14617-4 (Abrasion)

EN 14617-5 (Freeze thaw resistance)

EN 14617-6 (Thermal Shock resistance)

EN 14617-09 (Impact resistance)

EN 14617-10 (Resistance to Chemicals)

EN 14617-11 (Thermal expansion coefficient)

EN 13501-1 (Flammability)

ČSN 725191 P CEN/TS 16165 (Slipperiness)

American Testing Standards (ASTM)

ASTM C97 (Absorption, Bulk Specific Gravity)

ASTM C99 (Modulus of Rupture)

ASTM C880 (Flexural strength (bending))

ASTM C1028 (Static Coefficient of Friction)

ASTM C650 (Resistance to Chemical Substances)

ASTM C1378 (Resistance to Staining)

ASTM C484 (Thermal Shock Resistance)

ASTM C648 (Breaking Strength)

ASTM C241 (Abrasion Resistance)

ASTM E84 (Flammability)

ASTM E228 (Thermal expansion coefficient)

Warranty

Validity

Technistone offers 25-year warranty on material used in an interior. This warranty does not cover material used in commercial premises, for which there is a five-year warranty.

The 5-year warranty covers slabs installed in areas accessible to the public, beginning with the date of installation.

The warranty must be activated by registering your TechniStone® product on the company's website under the section "Warranty".

The warranty starts the day that the fabricated slabs are installed by a licensed fabricator in the interior living space. Registration must be completed within 30 days of said installation.

The seller is obligated to provide and abide by the warranty information presented to the customer throughout the warranty period, in accordance with these warranty terms.

To process the claim and ensure quick quality service, contact the location where the original TechniStone® slab was purchased.

Provide quality photo documentation of the defects claimed.

During warranty service, the product must be available to the designated Technistone representative to perform a visual inspection and the customer must follow the representative's given instructions.

In the event that a slab replacement is decided, the processing, reinstallation, and associated costs will not be covered by the warranty issued by TechniStone®.

Technistone reserves the right, in agreement with the customer, to replace the defective slab with a new design in the current product offer, which is regularly updated due to development and market requirements.

25-year
warranty

TechniStone®
A WILSONART COMPANY

Maintenance and Cleaning

For proper maintenance it is very important to clean the material only with water or neutral detergents.

We recommend using a microfiber cloth to achieve a high surface gloss.

Cutting directly on the worktop is not recommended.

Prolonged exposure to aggressive cleaners may damage the surface of the product!

Insulating pads must be used under hot objects.

Sustainability

Living in harmony with nature and not taking its beauty for granted. At TechniStone, we do our best to preserve nature's resources while being as considerate as possible in our operations.

3R We support sustainable development through the three magic Rs, **REDUCE - RECYCLE - REUSE**

By applying these mottos both in production and in our daily lives, we strive to help reduce material waste and preserve natural resources.

1 REDUCE

We **reduce** waste, use resources prudently and reduce the side effects of resource extraction.

2 RECYCLE

We **recycle** unused waste material.

3 REUSE

TechniStone® product can be **reused** in different forms and variations, thus contributing to long-term sustainability. Thanks to the extraordinary properties given by the combination of nature and modern 21st century technology, the material can retain its beauty for many years.

TechniStone®
A WILSONART COMPANY

Stone with soul

Engineered stone lives life with us – its owners

It takes many forms – in architecture, modern design, timeless home furnishings

It comes alive through our perceptions. It reflects the individuality – the character, taste, and values – of its owner

It remembers stories – some of which last for only a moment, others that remain inscribed in our minds forever

Where there is life, there is soul, revealed in the story of Stone With Soul

A touch of living perfection – TechniStone® welcomes visitors to its website and on social media. It speaks to the world with its brochures, billboards, manuals, blog articles, and more.
